

# Cognifyz Technologies Data Analysis Internship Final Project Report

## Student

Laxmi Gupta

## Project Overview

This report summarizes the successful completion of all Level 1, Level 2 and Level 3 tasks of the Cognifyz Technologies Data Analysis Internship using a restaurant dataset.

## Objectives

Perform data exploration, descriptive analysis, cuisine analysis, price range analysis, feature engineering, geographical analysis, restaurant chain analysis, predictive modeling, customer preference analysis and data visualization.

## Tools

Python, Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook.

## Level 1

Task 1: Data Exploration and Preprocessing.

Task 2: Descriptive Analysis.

Task 3: Cuisine Analysis.

## Level 2

Task 1: Price Range Analysis.

Task 2: Feature Analysis (Online Delivery/Table Booking).

Task 3: Geographical Analysis.

Task 4: Restaurant Chains Analysis.

## Level 3

Task 1: Predictive Modeling.

Task 2: Customer Preference Analysis.

Task 3: Data Visualization and Business Insights.

## Key Insights

Most restaurants belong to Price Range 1. Ratings are concentrated between 3 and 4. Mid-range restaurants provide online delivery more frequently, while higher-priced restaurants offer table booking more often.

## Skills Gained

EDA, Data Cleaning, Data Visualization, Statistical Analysis, Business Insights, Python Programming.

## Conclusion

All internship tasks were completed successfully. The project demonstrates practical experience in analyzing real-world datasets and communicating insights through visualizations.
